

# CHAMELEONS

Chameleons are hiding experts! This reptile is best known for its' ability to change skin color depending on the surroundings, called **camouflage**. Chameleons have this cool ability for protection from **predators**. They live all throughout South Asia, Africa, Europe, and even Florida!

**FAST FACT:** Did you know chameleons can move their eyes **independently** from each other? That means they can focus on two things at one time! They can also move them 360 degrees.

There are more than 160 different types of chameleons. They can be from 2 inches to 2 feet long. Most female chameleons will dig holes and lay around 20 eggs. The mother will leave them where they will hatch and grow on their own.
